- c. Many of the activities contemplated in LIHUFF are already fully covered by other operations of the Station. LIHUFF would not contribute enough beyond the overlap to be justified.
- d. The Project would tend to put too much reliance on conservative elements, around whom we have already built a sizeable proportion of our program in Mexico. Headquarters does not wish to expand further our involvement with these elements.
- e. We have noted, in both LIHUFF and LISIREN, the reluctance of Mexican busineszmen to contribute to anticommunist programs because they cannot deduct the contributions from their income taxes. As a matter of principle, we are moved to ask why ODYOKE funds should be spent in any program—whose primary objective, after all, is to preserve the capitalistic system under which these Mexican industrialists hold and increase their affluence—if those who will benefit most materially and most directly from it are unwilling to contribute without some recompense. Should the PBPRIME taxpayer assume the burden of helping those who are unwilling to share that burden? We feel he should not when he bears such a heavy burden all around the world.
- 3. The lack of a formal project relationship would not prevent the Station from using the LIHUFF organiztion from time to time on a targets-of-opportunity basis, as has been done in the past. In such cases the Station could use its D & TO funds. This use should be limited, and the outlay of funds should be minimized as much as possible.
- 4. The contribution of Station funds for the publication of Identity A may continue to the end of FY 63. Beginning 1 July 1963 we would like the Station to phase out this expense at whatever rate seems most suitable, but the phase-out should be completed by 31 December 1963. Further contributions cannot be authorized beyond that date.
- 5. Please inform us of the Station's intentions regarding LIHUFF-1. He can be kept as a cutout to LIHUFF, but with the curtailment of KUBARK's connection with LIHUFF, his services will not be used enough to justify the salary that has been proposed. The Station may either reduce his salary or use him more fully on other operations in order to justify it. The latter, of course, is contingent on his suitability--- in terms of security considerations, his aptitude for certain types of operations, his own preferences, time available, and so on---to serve other operations. If the Station cannot make profitable use of LIHUFF-1 in other operations, it may terminate him at its discretion. If the Station plans to keep LIHUFF-1, he should be placed under a project as soon as his operational use is determined. If it is not feasible to put him under the project that he will be working on, then a separate project should be written to cover him.
